

Payroll — Simple Guide

How to pay your staff with Kiruko. No tech knowledge needed.

You set things up **once**, then each month you just **Run** → **Check** → **Finalize**.

Set up once

1. Choose how pay works — *Settings* → *Payroll*

- **Track attendance?** Turn **ON** if staff clock in and out (missed days reduce pay). Turn **OFF** to always pay full salary.

2. Add your staff — *Team Members* → *Add employee*

- Fill in their name, department, and salary (or hourly rate). They're ready for payroll.

3. Check their pay — *Payroll* → *Salary Configuration*

- Each person has their own pay card you can open and edit anytime.

✅ Setup done.

Every month (3 steps)

1. Get the month ready

- Tracking attendance? Approve clock-ins (*Clock-in Review*), approve overtime (*Overtime*), add leave (*Leave*).
- Not tracking? Skip straight to step 2.

2. Start payroll & check it — Payroll → Payroll Runs → Start payroll

- Pick the month. A payslip appears for everyone with the numbers worked out. Open a few to check.

3. Finalize

- Click **Finalize** to make the payslips official. Done — download and share them.

What's on a payslip

Fixing one person after you've finalized

Finalized payslips are **locked** — you don't re-run the whole payroll for one mistake. You make a **Correction** for just that person. The original payslip stays untouched; the correction records only the **difference** (the top-up or the claw-back).

This happens on the **Disputes** screen — when an employee flags a pay issue, you handle it there.

- **Preview first.** It shows the exact before/after so you confirm a real change. If you haven't fixed the underlying data yet, it tells you "nothing changed — fix it first."
- **The original is never altered** — the correction is a separate slip showing only the +/- change, with the reason.
- **The app doesn't move money.** You pay the difference to (or recover it from) the employee yourself. They're notified automatically and get a correction note.

Good to know

- 💡 **Made a mistake?** Before finalizing, click **Cancel** and start again. Nothing is lost.
- 📅 **Run months in order** — finish one month before starting the next.
- 🔒 **Finalize locks it.** After that, fix one person with a **Correction** (see above) — you don't re-run everything.
- 🎁 **December** automatically adds the **end-of-year bonus** = the employee's **total pay for the year ÷ 12** (about one month's salary for someone who worked the full year). They need ~12 months of service to qualify. You don't calculate it — it appears on the December payslip.
- 🏠 **Taxes are calculated for you** — you never do the math.

Stuck on a screen? Each page has a short note at the top explaining what it does.
